

Computer and Monitor Stacking Instructions

Use the following instructions when preparing equipment for pickup by E-Solutions.
If you do not have the logistics or resources; call us – E-Solutions is a full service company!

Always put heaviest items on skid first!

Monitors

1. Place monitors face down. Cardboard should be placed below monitor screens.
2. Stack as many as practical without exceeding 6 ft. overall height.
3. Shrink wrap skids enough to prevent movement while transporting.

Computers

Since computer workstations are not uniform in size prepare as follows:

1. Arrange workstations on skid neatly so that as many as possible fit in a "block" or "layer"
2. Place cardboard between blocks or layers.
3. Shrink wrap skids enough to prevent movement during transporting
4. Do not stack higher than 6ft. overall height.
5. Do not allow any item to over hang edge of skid
